

Engineered to Keep Your Business Running

## SSV TM100 - SSV TM215 DRUM MOTORS

4.0" to 8.5" diameter • 0.11 to 7.5 hp

### SANITARY DRUM MOTORS

$$\text{BELT PULL (BP)} = (F_0 + F_1 + F_2)$$

#### Roller Bed Conveyor

$$F_0 = 0.04 (2P + Q) L$$

$$F_1 = 0.04 \times R \times L$$

$$F_2 = R \times H$$

#### Slider Bed Conveyor

$$F_0 = 1.1 \times P \times L \times C$$

$$F_1 = 1.1 \times R \times L \times C$$

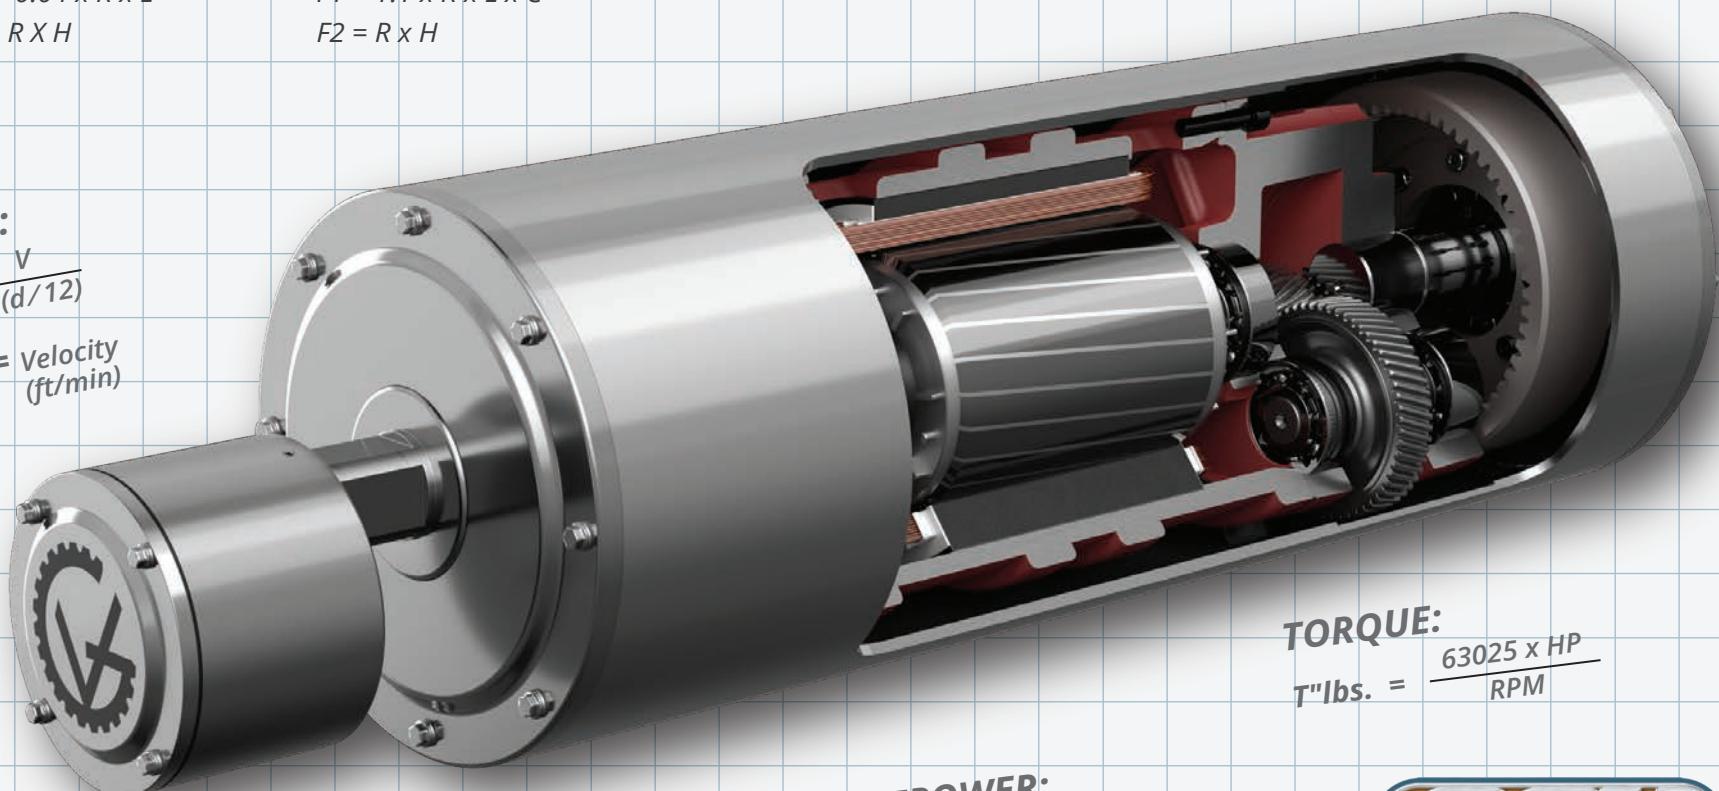

$$F_2 = R \times H$$

|------------------------------------|----|

The drum motor is a single component conveyor drive. The electric motor and the gear reducer fit inside the conveyor head roller, hermetically sealed and bathed in oil. All vital components of the drum motor are housed inside the drum, increasing operator safety and eliminating yearly maintenance that is typically required on external motor/gearbox drive arrangement.

The all 316 stainless steel USDA approved drum motor, with an IP69K sealing system, is designed to withstand high pressure wash down up to 3,000 psi with sanitizing cleaning detergents. The completely sealed drum motor is ideal for meat and poultry, food and pharmaceutical conveyor systems operating in demanding sanitary applications.

SSV Sanitary Drum Motors are engineered to drive modular, monolithic thermoplastic cleated and wire conveyor belts, where hygiene and food safety is of the utmost importance. Available in all standard and non-standard voltages, wide range of diameter sizes, belt speeds, horsepower and face widths.

## INCREASE OPERATOR SAFETY

The drum motor has no external moving components that present safety hazards; such as motor, gearbox, chains, chain guard and pillow block bearings, typical of conventional conveyor drives. The drum motor with the electric motor, gear reducer and bearings located inside the drum, is protected from the plant's operational environment, increasing operator safety.

## ENHANCE SPACE UTILIZATION

Low profile of the drum motor results in a streamline appearance and allows to fit more belt conveyor into less floor or overhead space. Allows higher density and multiple applications.

## REDUCE MAINTENANCE & DOWNTIME

The hermetically sealed drum motor does not require regular maintenance, only a recommended oil change every 50,000 hours of operation.

## LOWER ENERGY COSTS

Van der Graaf drum motors operate at 96% mechanical efficiency. The motor and gear reducer are in-line, sealed inside the drum, resulting in lower operating cost compared to conventional drives. The higher efficiency of the internal drive can result in energy savings of up to 30% over conventional exposed-drive conveyors. (Refer to Energy and Cost Savings Analysis - page 18)

## REDUCE NOISE LEVELS

Our gears are manufactured using high quality alloy steel, cut and honed to AGMA/DIN 6 standards, reducing noise to minimal decibel levels which exceeds OSHA requirements for noise.

The USDA approved, SSV Sanitary Drum motors are a bolt-on design, constructed of 316 stainless steel for corrosion prevention, enhancing stringent hygienic and sanitary standards..

## ELECTRIC MOTORS

All Van der Graaf high efficiency electric motors are manufactured to inverter duty standards, are fully reversible and can be supplied in all standard and non-standard voltages and frequencies for three phase or single phase applications.

All material used for the electric motor windings meet Class F standards (155°C). The optional Class H standards (180°C) is required for applications with ambient temperature of 125°F and higher.

All Van der Graaf electric motors are encapsulated by **Vacuum Pressure Impregnation (VPI)** process. This state-of-the-art method is the highest industry standards for electric motor encapsulation. The VPI process increases the longevity of the electric motor and substantially reduces electric motor failures.

## GV THERMAL (GVTERM) OVERLOAD PROTECTION

Thermal overload protectors are devices embedded into the motor windings. When temperature within the motor exceeds the rated temperature, the GVTERM will trip, causing an open circuit between the respective GVTERM leads.

## NON-STANDARD LENGTH / EXTRA LONG FACE WIDTH

Please contact your Van der Graaf technical representative for details.

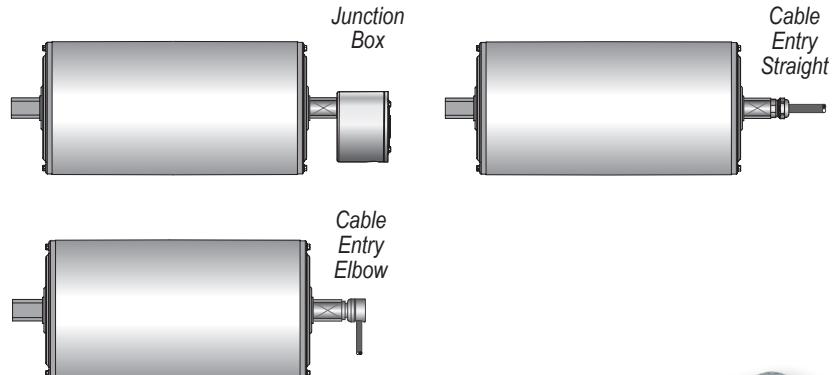

## LAGGING

Van der Graaf offers a complete line of blue or white nitrile rubber and white urethane USDA, FDA approved food grade lagging. Bonded to the drum using hot vulcanized method, the seamless lagging provides traction in standard and wet applications. Available in standard or custom thicknesses, with smooth, chevron/herringbone or diamond patterns.

## ELECTRICAL POWER CONNECTION

Junction Box or Cable Entry power hook-up is available as standard.

## DRUM PROFILES

### Crowns

To help track the belt more effectively, the shell of all Van der Graaf drum motors are machined to convex crown 0.7% of the diameter as standard. Other profiles such as trapezoidal or flat face are also available.

### V-Grooves

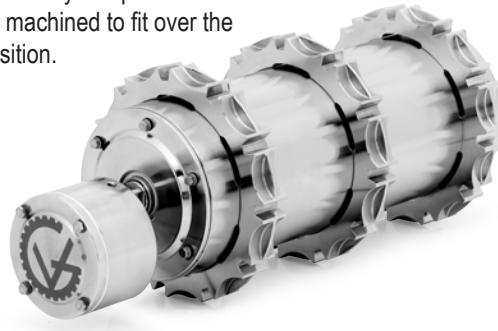

A variety of industry standard V-grooves are-machined into the shell of the drum motor for optimal tracking. Single or multiple v-groove locations are available on all Van der Graaf drum motors.

## FOR MODULAR, WIRE MESH AND MONOLITHIC THERMOPLASTIC CONVEYOR BELT PROFILES

Van der Graaf offers sprocketed drum motors and drum motors with belt profiles machined directly on to the stainless steel drum, designed in accordance with most major belt manufacturers specifications.

### Sprocketed Drum Motors

Available with all 316 stainless steel or nylon sprockets for most major conveyor belt profiles, machined to fit over the drum motor; floating or fixed to position.

### Continuous Profiles

### Continuous Profiled Drum Motors

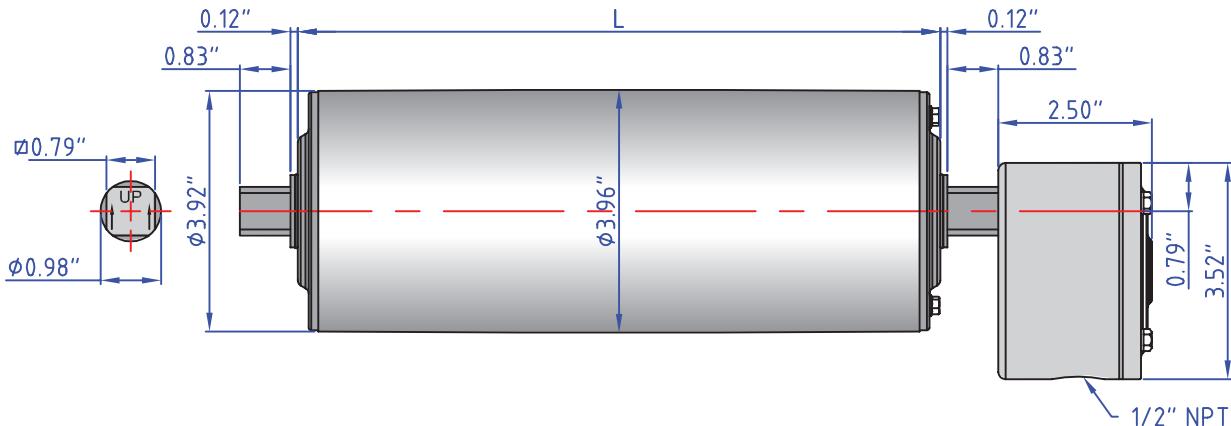

The drum motor with a continuous profile has the belt profile machined directly on to the 316 stainless steel drum, designed in accordance with most major belt manufacturers specifications, to drive modular, wire mesh and monolithic thermoplastic conveyor belts without the use of sprockets. The continuous profiled drum motor, does not have crevices for food by-product to get trapped, reduces conveyor-cleaning time and eliminates areas for bacteria to harbor, contributing to a higher level of sanitation.

## SSV TM100 SERIES DIMENSIONS (4.0" diameter)

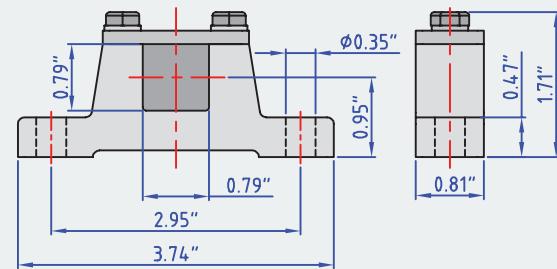

### SSV TM100B25 Drum Motor (matching Idler KT100B25\*\*)

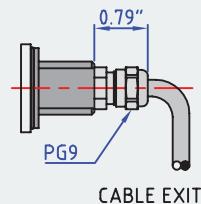

Standard drum motor face widths\* (L) in inches:

|       |       |       |       |       |       |       |       |       |
|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| 10.24 | 10.83 | 12.20 | 14.17 | 16.14 | 18.11 | 20.08 | 22.05 | 24.02 |
| 25.98 | 27.95 | 29.92 | 31.89 | 33.86 | 35.83 | 37.80 | 39.76 | 41.73 |
| 43.70 | 45.67 |       |       |       |       |       |       |       |

### Bracket AB 20

### Optional Cable Type

\*Some face widths are not available in all horsepower. For minimum available face widths refer to page 16.

\*\*Idler dimensions are identical to the drum motor with no junction box.

## SCOPE

This is a comparative analysis concerning the energy consumption of a conventional conveyor with an electric motor, a gear reducer and a chain drive, and a conveyor driven by a Van der Graaf drum motor.

## HYPOTHESIS

There will be considered that both conveyors, the conventional conveyor and the conveyor driven by Van der Graaf Drum Motor:

- a) have the same rated output power,
- b) operate in the same environmental conditions (temperature, pressure, humidity, altitude),
- c) supplied power have the same parameters (phase number, line voltage, frequency),
- d) loaded at the same constant output power, equal by the rated output power, for the whole period of the considered operation time.

## CALCULATION

a) The conventional conveyor (index C from conventional) operates with a Baldor motor VM3615T, with rated output power 5 hp, (or 3730 W, rated speed 1750 rpm, rated voltage 3 x 460 V, rated frequency 60 Hz), a coupling, a right angle gear reducer with a gear ratio 20, and a chain drive with ratio 1.5. The electric motor has the rated efficiency 85.5%, the coupling has the efficiency 99%, the gear reducer is a worm gear reducer with efficiency 87% [6.5] and the chain drive has the efficiency 75%. (See page 41, Diagram B)

**The total efficiency of the Conventional Conveyor is:**

$$\eta_C = 0.855 \times 0.99 \times 0.87 \times 0.75 = 0.552, \text{ or } 55.2\%$$

The input power (index 1 for input and 2 for output) of the conventional conveyor is:

$$P_{1C} = P_{2C} / \eta_C = 3730 / 0.552 = 6757.25 \text{ W} \approx 6.757 \text{ kW}$$

b) The conveyor (index M from drum motor) driven by a Van der Graaf Drum Motor is considered. It has the same rated output power as the conventional conveyor, 5 hp or 3730 W and contains an electric motor with rated efficiency 87% and a parallel-shaft gear reducer with efficiency 0.96%. (See page 41, Diagram A)

**The total efficiency of the conveyor driven by Van der Graaf Drum Motor is:**

$$\eta_M = 0.87 \times 0.96 = 0.835, \text{ or } 83.5\%$$

The input power (1 for input and 2 for output) of the conveyor driven by Van der Graaf drum motor is:

$$P_M = P_{2M} / \eta_M = 3730 / 0.835 = 4467 \text{ W} = 4.467 \text{ kW}$$

c) An operation time of both conveyors is determined taking into consideration that both conveyors work 8 hours shift, 2 shifts per day, 5 days per week, and 52 weeks per year,  $t = 8 \text{ hours}/\text{shift} \times 2 \text{ shift}/\text{day} \times 5 \text{ days}/\text{week} \times 52 \text{ weeks}/\text{year} = 4160 \text{ hours/year}$ .

d) The electric energy consumed by the conventional conveyor, in the considered operation time, is determined by the product of the input active power and the operation time:

$$P_C = P_{1C} t = 6.757 \text{ kW} \times 4160 \text{ hours/year} = 28109.12 \text{ kWh/yr} \approx 28109 \text{ kWh/yr}$$

e) The electric energy consumed by the conveyor driven by Van der Graaf Drum Motor, in the considered operation time, is similarly determined:

$$E_M = P_{1M} t = 4.467 \text{ kW} \times 4160 \text{ hours/year} = 18583 \text{ kWh/yr}$$

f) An average price of the electric energy in USA is considered:  $p = 0.08 \text{ USD/kWh}$ .

g) The cost of the electric energy per year of the conventional conveyor will be calculated as the product between the consumed electric energy in the considered operation time and the specific price of the electric energy:

$$C_C = E_C \times p = 28109 \text{ kWh/yr} \times 0.08 \text{ USD/kWh} = 2248.72 \text{ USD/yr} \approx 2249 \text{ USD/yr}$$

h) The cost of the electric energy per year of the conveyor driven by Van der Graaf drum motor will be similarly calculated:

$$C_M = E_M \times p = 18583 \text{ kWh/yr} \times 0.08 \text{ USD/kWh} = 1486.64 \text{ USD/yr} \approx 1487 \text{ USD/yr}$$

i) The energy saving per year of the higher efficient conveyor, respectively of the conveyor driven by Van der Graaf drum motor, is determined as a difference between the consumed energy of the conventional conveyor and the consumed energy of the conveyor driven by Van der Graaf drum motor, in the considered operation time of one year period (See page 41, Graph 1)

$$ES = E_C - E_M = 28109 \text{ kWh/yr} - 18583 \text{ kWh/yr} = 9562 \text{ kWh/yr}$$

j) The cost saving per year of the higher efficient conveyor, respectively of the conveyor with a Van der Graaf drum motor, is determined as a difference between the cost of the consumed energy of the conventional conveyor and the cost of the consumed energy of the conveyor driven by Van der Graaf drum motor, in the considered operation time of one year period (See page 41, Graph 2)

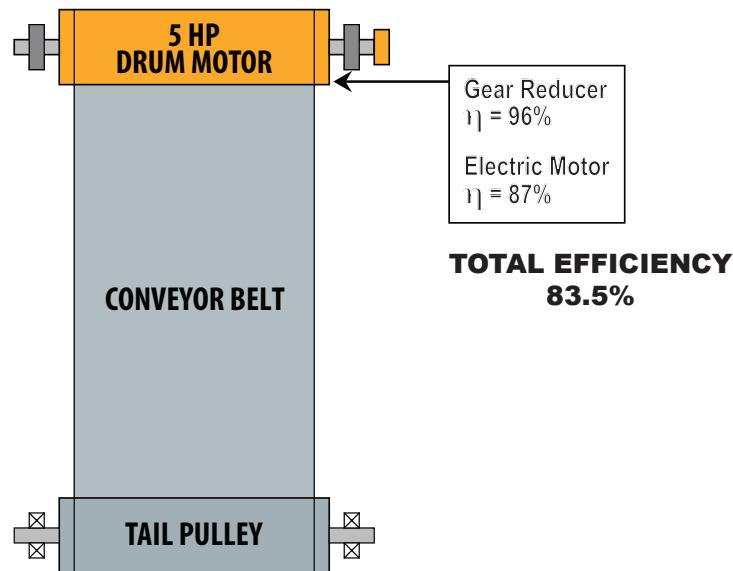

$$CS = C_C - C_M = 2249 \text{ USD/yr} - 1487 \text{ USD/yr} = 762 \text{ USD/yr}$$

## ENERGY COST SAVINGS WITH CONVEYOR DRIVEN BY VAN DER GRAAF DRUM MOTOR IS 762 USD/YEAR

**NOTE:** If the cost of energy of the conventional conveyor is considered 100%, than the cost of energy of the conveyor driven by Van der Graaf Drum Motor is 66% and the cost savings with the Van der Graaf Drum Motor is 34%.

# ENERGY & COST SAVINGS ANALYSIS

Diagram A: Conveyor Driven by a Van der Graaf Drum Motor

Graph 1: Energy Consumption Comparison

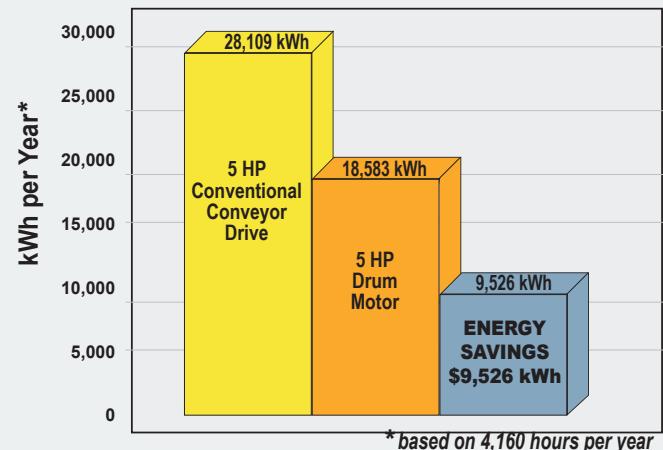

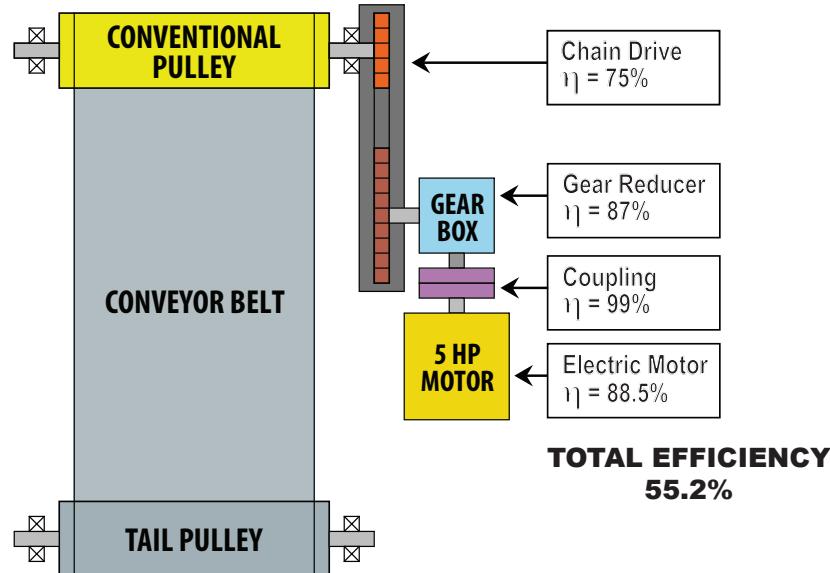

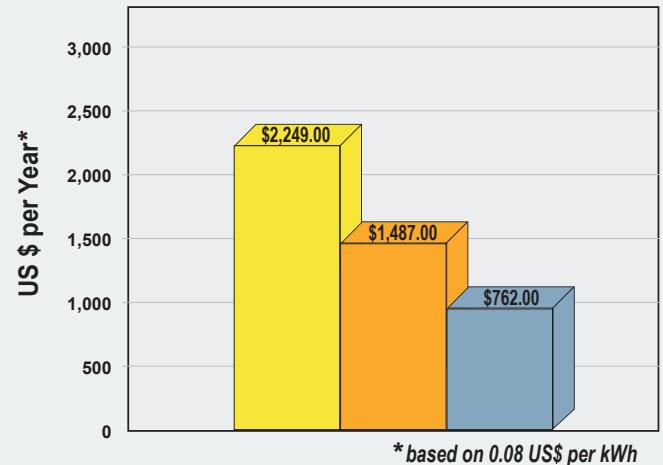

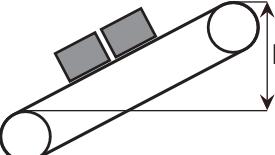

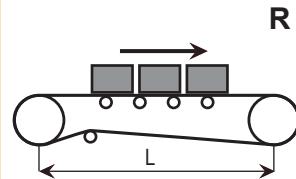

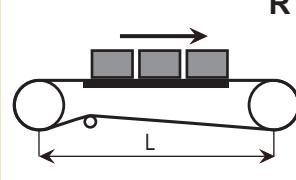

Diagram B: Conveyor Driven by a Conventional Conveyor Drive

Graph 2: Energy Cost Comparison (@ 0.08 USD/kWh)

# BELT PULL CALCULATIONS

| Conveying System  | $F_0$   | $F_1$  | $F_2$   |
|---|---|--|---|
|   |  |  |  |
| Force without load  | Force to convey materials horizontally  | Force to convey materials on incline   |   |
| <br><b>Roller bed conveyor</b>  | $F_0 = 0.04 (2P + Q) LF$  | $F_1 = 0.04 \times R \times LF$  | $F_2 = R \times H$  |
| <br><b>Slider bed conveyor</b> | $F_0 = 1.1 \times P \times L \times C$  | $F_1 = 1.1 \times R \times L \times C$   | $F_2 = R \times H$  |

## BELT PULL(BP):

$$BP = (F_0 + F_1 + F_2) \text{ in pounds}$$

**F** = Force (lbs.)

**P** = Belt weight (lbs./linear ft.)

**Q** = Weight of rotating parts in pounds per foot of length of belt conveyor

**R** = Weight in pounds of conveyed product per foot of belt conveyor length

**C** = Co-efficient of friction between conveyor belt and top slider bed

**L** = Center to center length (feet)

**H** = Height (feet)

*Netherlands*

*Van der Graaf has provided solutions to the material handling industry for over half a century. By making consistent investments in factory automation over the years, Van der Graaf continues as the leading global supplier of conveyor belt drives for a broad range of industries. Whether it's an explosion-proof motor for driving coal mine conveyor belts or sanitary drives in a food processing plant, Van der Graaf has innovative designs to solve application challenges.*

*Van der Graaf has adhered to a simple principle: design a superior product to meet customer needs in a changing marketplace.*

*Van der Graaf offers outstanding application engineering and customer service for high quality products and years of low maintenance performance. Our products and people are trusted around the world for reliable performance and personal service*
